Find success working from home

Admit it - if you have had a job outside the house, you’ve wished that you could stay home, wear your pajamas and just chill. Many in our community are now working from home and have to find a new “normal” for success. The following tips for successfully working remotely came from a Utah Extension course as well as eXtension Foundation’s on line resources.

Work Day- First, plan your day and when you work. The simple process of writing down what you need to get done holds you accountable. When you see what’s expected of you, you’re more likely to stay focused and stick to your plan. Plan times throughout the day when you can get away from your workspace. This might mean taking a lunch break, going for a walk, playing with your child or pet or anything else that gets you up and moving. These breaks keep your energy levels up and your mind active. Telecommuting creates a new set of distractions than what you are used to. Yes, there aren’t coworkers chatting your ear off, but there is a television full of your favorite shows in the next room.

Everyone has an end of day routine like rinsing out your coffee cup, closing all the tabs on your computer, or even driving home. This is more difficult for people who work and live in the same space. Create your end of the day process to divide your workday and the rest of your evening. Change into different clothes, go for a walk, reward yourself, anything to create the mental barrier between your work and your home.

Workspace- Designate a specific place to work. This helps to set physical boundaries of where you work and where you relax. When selecting your designated workspace, it is important to find a quiet area with some physical barriers so that others can visually see when you are working. It is also important to have a good computer set-up including space for all of your equipment and adequate connectivity.

Consider what your working environment would look like when using video conferencing. It should be aesthetically pleasing and should appear “professional” when the video is on! And, it is important to use the video feature so that you are engaged in the meeting, not distracted with other tasks.

Communication- This has been identified as the number one challenge of remote workers. Take some time to explore various tools and try them out. It is important to set times to communicate with your co-workers. However, it is just as easy to spend too much as it is too little time using electronic communication tools as it is in a face to face office setting.

Teamwork- Identify an electronic tool that your entire office team can use to communicate and organize workflow including timelines. This allows everyone to know what each other is responsible for on team projects and reduces duplication of efforts. A regularly scheduled team meeting via technology is also important. The frequency will be different for each office team.

Compliance- Make sure that you are complying with all of the guidelines set by your employer related to equipment and protected information. This relates to the security of your internet
connection. Also, if requested, it is important to keep a log of projects completed and hours worked.

Finally, take care of yourself and your family. This is a new challenge of balancing work and family!

K-State Research and Extension — all in-person events have been canceled through May 16

K-State Research and Extension is a short name for the Kansas State University Agricultural Experiment Station and Cooperative Extension Service, a program designed to generate and distribute useful knowledge for the well-being of Kansans. Supported by county, state, federal and private funds, the program has county Extension offices, experiment fields, area Extension offices and regional research centers statewide. Its headquarters is on the K-State campus in Manhattan.
